Letter of Recommendation
Nader Bennour

To whom it may concern,

I am pleased to recommend **Nader Bennour**, who worked with us at **orbal** as a well-rounded **Software Engineer with focus on Data Engineering and Automation** from June 1, 2023 until September 30, 2025 in a part-time capacity as a working student (18 hours per week).

During his time with us, Nader played a key role in building and maintaining our data infrastructure across the Ethereum and Layer 2 ecosystem. He developed and automated pipelines to index and process data from over 30 chains, including implementing RPC rotation, managing backfills, and ensuring stable operations. Beyond pipelines, he contributed to a wide variety of automation and tooling efforts — from building stablecoin adapters and Discord bots to exploring the use of AI tools within our workflows.

Nader combined technical depth with impressive adaptability. While his primary focus was data engineering, he consistently showed the ability to take on diverse coding tasks across our stack. His expertise spanned **Python, SQL, AWS, Google Cloud, Next.js, and TypeScript**, and he always approached challenges with optimism and clear communication.

What stood out most was his reliability and availability: Nader could be counted on to deliver, proactively maintain processes, and step in wherever engineering support was needed. His breadth of interests and enthusiasm made him not just a valuable contributor, but also a positive presence in our team.

I am confident that Nader will be an asset to any organization he joins in the future. He has demonstrated both strong technical capabilities and the personal qualities that make collaboration effective and enjoyable.

Please feel free to reach out to me if you would like further details about his work with us.

Sincerely,

Matthias Seidl
